I. Questions

Question 1: Emoji Expressions

Imagine you're analyzing social media posts for sentiment analysis. If you were to create a variable named "postSentiment" to store the sentiment of a post using emojis (😀 for positive, 😐 for neutral, 😥 for negative), what data type would you assign to this variable? Why? (narrative type question, no code required)

Question 2: Hashtag Havoc

In a study on trending hashtags, you want to store the list of hashtags associated with a post. What data type would you choose for the variable "postHashtags"? How might this data type help you analyze and categorize the hashtags later? (narrative type question, no code required)

Solution: character

Question 3: Time Traveler's Log You're examining the timing of user interactions on a website. Would you use a numeric or non-numeric data type to represent the timestamp of each interaction? Explain your choice (narrative type question, no code required)

Solution: numeric.

Solution: character

Question 4: Event Elegance You're managing an event database that includes the date and time of each session. What data type(s) would you use to represent the session

date and time? (narrative type question, no code required) **Solution:** double (time) and character (date)

Question 5: Nominee Nominations

You're analyzing nominations for an online award. Each participant can nominate multiple candidates. What data type would be suitable for storing the list of nominated candidates for each participant? (narrative type question, no code required)

Solution: character

Question 6: Communication Channels

would you assign to the variable "preferredChannel"? (narrative type question, no code required)

In a survey about preferred communication channels, respondents choose from options like "email," "phone," or "social media." What data type

Solution: character **Question 7: Colorful Commentary**

In a design feedback survey, participants are asked to describe their feelings about a website using color names (e.g., "warm red," "cool blue").

What data type would you choose for the variable "feedbackColor"? (narrative type question, no code required)

Solution: charactr

Question 8: Variable Exploration

Imagine you're conducting a study on social media usage. Identify three variables related to this study, and specify their data types in R. Classify each variable as either numeric or non-numeric.

Solution: social media channel used: character (non numeric), hours spent on social media: double (numeric), feelings when using social media channel: character (non numeric) **Question 9: Vector Variety**

Create a numeric vector named "ages" containing the ages of five people: 25, 30, 22, 28, and 33. Print the vector. **Solution:**

print(ages <- c(25,30,22,28,33))

Enter code here

[1] 25 30 22 28 33

Question 10: List Logic

Construct a list named "student_info" that contains the following elements: A character vector of student names: "Alice," "Bob," "Catherine"

• A numeric vector of their respective scores: 85, 92, 78 A logical vector indicating if they passed the exam: TRUE, TRUE, FALSE

Print the list. **Solution:**

scores <- c(85,92,78)

Question 11: Type Tracking

passed exam <- c(TRUE, TRUE, FALSE)</pre>

student_names <- c("Alice", "Bob", "Catherine")</pre>

Enter code here

print(student info<-list(student names, scores, passed exam))</pre>

[[1]] ## [1] "Alice" "Bob" "Catherine" ## [[2]] ## [1] 85 92 78 ## [[3]] ## [1] TRUE TRUE FALSE

You have a vector "data" containing the values 10, 15.5, "20", and TRUE. Determine the data types of each element using the typeof() function.

Enter code here data <-c(10,15.5,"20",TRUE)typeof(10)

Solution:

typeof(15.5)

typeof("20") ## [1] "character"

[1] "logical"

the updated vector.

[1] "double"

[1] "double"

typeof(TRUE)

You have a numeric vector "prices" with values 20.5, 15, and "25". Use explicit coercion to convert the last element to a numeric data type. Print

Solution: # Enter code here

Question 13: Implicit Intuition

prices <- c(20.5, 15, "25")

[1] 20.5 15.0 25.0

Question 12: Coercion Chronicles

print(prices <- as.numeric(prices))</pre>

x <- c(5,10,15, "apple", "banana", "cherry")</pre>

Combine the numeric vector c(5, 10, 15) with the character vector c("apple", "banana", "cherry"). What happens to the data types of the combined vector? Explain the concept of implicit coercion. **Solution:**

[1] "character" **Question 14: Coercion Challenges**

Enter code here

sum(numbers)

[1] 35.2

numbers <-c(7,12.5,"15.7")

numbers <- as.numeric(numbers)</pre>

Enter code here

typeof(x)

You have a vector "numbers" with values 7, 12.5, and "15.7". Calculate the sum of these numbers. Will R automatically handle the data type conversion? If not, how would you handle it? **Solution:**

Question 15: Coercion Consequences Suppose you want to calculate the average of a vector "grades" with values 85, 90.5, and "75.2". If you directly calculate the mean using the

mean() function, what result do you expect? How might you ensure accurate calculation? **Solution:**

[1] 83.56667 **Question 16: Data Diversity in Lists**

A numeric vector: 10, 20, 30

Create the "mixed data" list

print(mean_of_numeric_vector)

passed_exam = c(TRUE, TRUE, FALSE)

Create a list named "mixed_data" with the following components:

Calculate the mean of the numeric vector within the list mean_of_numeric_vector <- mean(mixed_data\$numeric_vector)</pre>

grades <-c(85,90.5,"75.2")grades <- as.numeric(grades)</pre>

Enter code here

mean(grades)

• A character vector: "red", "green", "blue" • A logical vector: TRUE, FALSE, TRUE Calculate the mean of the numeric vector within the list.

numeric vector = c(10, 20, 30), character_vector = c("red", "green", "blue"), logical_vector = c(TRUE, FALSE, TRUE)

print(scores[2])

[1] 92

[1] 500

word "apple."

Enter code here

print(words=="apple")

print(ages[ages>30])

[1] 39 45 67

Enter code here

Enter code here numbers <-c(1:10)print(numbers[4:8])

[1] 4 5 6 7 8

x < -c(1:20)

Solution:

Solution:

Solution:

30.

Question 19: Multiple Matches

[1] TRUE FALSE FALSE TRUE

Question 20: Conditional Capture

Enter code here

mixed_data <- list(</pre>

Solution:

[1] 20 Question 17: List Logic Follow-up Using the "student_info" list from Question 10, extract and print the score of the student named "Bob." **Solution:** # Enter code here student_info <- list(</pre> student_names = c("Alice", "Bob", "Catherine"), scores = c(85, 92, 78),

You have a character vector words <- c("apple", "banana", "cherry", "apple"). Write R code to find and print the indices of all occurrences of the

Assume you have a vector ages containing the ages of individuals. Write R code to extract and print the ages of individuals who are older than

Question 18: Dynamic Access Create a numeric vector values with random values. Write R code to dynamically access and print the last element of the vector, regardless of its length. **Solution:** # Enter code here x < -c(1,3,2,4,40,500)print(x[length(x)])

Solution: # Enter code here ages <-c(20,39,18,45,67)

Question 21: Extract Every Nth

Question 22: Range Retrieval

every_third_element <- x[seq(0,length(x),3)]</pre>

words <- c("apple", "banana", "cherry", "apple")</pre>

print(every third element) ## [1] 3 6 9 12 15 18

Create a numeric vector numbers with values from 1 to 10. Write R code to extract and print the values between the fourth and eighth elements.

Suppose you have a numeric vector data <- c(10, NA, 15, 20). Write R code to check if the second element of the vector is missing (NA).

Assume you have a numeric vector temperatures with daily temperatures. Create a logical vector hot_days that flags days with temperatures

Given a numeric vector sequence <- 1:20, write R code to extract and print every third element of the vector.

Solution: # Enter code here data <-c(10, NA, 15, 20)print(is.na(data))

[1] FALSE TRUE FALSE FALSE

Question 24: Temperature Extremes

print(sum(hot_days[hot_days==TRUE]))

[1] 3

Solution:

this condition.

Enter code here

[1] 10 20 55

Solution:

above 90 degrees Fahrenheit. Print the total number of hot days.

hot_days <- c(TRUE, FALSE, FALSE, FALSE, TRUE, TRUE)</pre>

Question 23: Missing Matters

Solution: # Enter code here temperatures <-c(100,29,45,66,80,94,98)

Create a character vector of fruit names fruits <- c("apple", "banana", "strawberry", "kiwi", "blueberry", "orange", "pineapple")</pre> # Create a logical vector to identify long fruit names

long_names <- nchar(fruits) > 6

Print the long fruit names

Question 26: Data Divisibility

Question 25: String Selection

characters. Print the long fruit names.

Enter code here

Given a numeric vector numbers, create a logical vector divisible_by_5 to indicate numbers that are divisible by 5. Print the numbers that satisfy

Given a character vector fruits containing fruit names, create a logical vector long_names that identifies fruits with names longer than 6

You have two numeric vectors vector1 and vector2. Create a logical vector comparison to indicate whether each element in vector1 is greater

long_fruits <- fruits[long_names]</pre> print(long_fruits) ## [1] "strawberry" "blueberry" "pineapple"

numbers <-c(10,20,55,46)divisible by 5 <- numbers %% 5 == 0answer <- numbers[divisible_by_5]</pre> print(answer)

[1] TRUE TRUE TRUE FALSE

Question 27: Bigger or Smaller? than the corresponding element in vector2. Print the comparison results. **Solution:**

Enter code here vector1 <- c(10,29,394,56)vector2 <- c(1,2,2,99)print(vector1>vector2)
