Challenge-2

Wong Zi Xin

2023-08-21

```
Welcome! Hope you have watched the lecture videos and followed the instructions in code-along. Go through the steps described below,
carefully. It is totally fine to get stuck - ASK FOR HELP; reach out to your friends, TAs, or the discussion forum on Canvas.
Here is what you have to do,
   1. Pair with a neighbor and work
   2. Download the Challenge-2.Rmd and playlist_data.csv files from Canvas
  3. Move the downloaded files to the folder, "Week-2"
  4. Set it as the working directory
```

5. **Edit** content wherever indicated

6. **Remember** to set eval=TRUE after completing the code to generate the output 7. **Ensure** that echo=TRUE so that the code is rendered in the final document

8. **Inform** the tutor/instructor upon completion

9. Submit the document on Canvas after they approve 10. **Attendance** will be marked only after submission

I. Exploring music preferences

Question 1.2: load the tidyverse package to work with .csv files in R.

11. Once again, **do not hesitate** to reach out to the tutors/instructor, if you are stuck

dataset, playlist data.csv, containing information about DJs, their preferred music genres, song titles, and ratings. Using the data-set you are required to complete some tasks that are listed subsequently. All these tasks are based on the concepts taught in the

video lectures. The questions may not be entirely covered in the lectures; To complete them, you are encouraged to use Google and the resources therein.

A. Background

B.Tasks

Imagine that you have been hired as a data analyst by a radio station to analyze music preferences of their DJs. They have provided you with a

Task-1 In the lecture, we used two data-sets, starwars and anscombe's quartet that were readily available with the packages, tidyverse and

Tmisc, respectively. When we have to use custom-made data-sets or the ones like we downloaded from Canvas, we have to import it using the R commands before using them. All the questions below are related to this task. Question 1.1: What does the term "CSV" in playlist_data.csv stand for, and why is it a popular format for storing tabular data? **Solution:**

The word "CSV" stands for "Comma-Separated Values". It is popular because each line represents a record and it is easy to read and write for

Solution: # Load the necessary package to work with CSV files in R.

library(tidyverse) — tidyverse 2.0.0 — ## — Attaching core tidyverse packages — ## **✓** dplyr 1.1.2 ✓ readr 2.1.4 ## / forcats 1.0.0 / stringr 1.5.0

✓ ggplot2 3.4.3 ✓ tibble 3.2.1 ## ✓ lubridate 1.9.2 ✓ tidyr 1.3.0

```
## ✔ purrr
              1.0.2
 ## — Conflicts —
                                                        tidyverse_conflicts() —
 ## * dplyr::filter() masks stats::filter()
 ## * dplyr::lag() masks stats::lag()
 ## i Use the conflicted package (<a href="http://conflicted.r-lib.org/">http://conflicted.r-lib.org/</a>) to force all conflicts to become errors
Question 1.3: Import the data-set, playlist_data.csv
Solution:
 # Import the "playlist_data.csv" dataset into R
 read_csv("playlist_data.csv")
```

Delimiter: "," ## dbl (3): Rating, Age, Plays_Per_Week

A tibble: 26 × 7

Rows: 26 Columns: 7

Delimiter: ","

read_delim {readr}
